

Pi Whisperers

Mike Ranis | Kenil Vora | Victor Wu | Samuel Chora

Project Description

Custom Speech Controlled System that can turn devices on or off as well as control various modes on those devices

Learning Objectives

- Programming w/ Raspberry Pi in C, Python, and Java
- Configuring Amazon Alexa on Raspberry Pi
- Local Host Tunneling for Transmission Protocol (NGROK)
- Setting up Alexa Voice Control with Raspberry Pi

GitHub

Timeline

Timeline & Challenges

Week 6: Brainstorm ideas and Project Outline

Week 7: Put together Hardware and Start Documentation

Week 8: Dependency Failures due to outdated Libraries

Week 9: Pivot to Amazon Libraries & Ngrok Client

Week 10: Final Testing, Documentation and Mock Presentations

Bill of Materials

MATERIAL	AMOUNT	COST	TOTAL
Raspberry Pi 3	1	\$34.88	\$34.88
LED's	9	\$0.35	\$3.15
1.5k Ohm Resistors	9	\$0.71	\$6.39
16 GB SD Cards	2	\$11.84	\$23.68
Amazon Libraries	1	N/A	N/A
Relay	1	\$5.00	\$5.00
Logic Level Shifter	1	\$8.00	\$8.00

GRAND TOTAL COST = \$ 81.10

Build Steps

1. Integrate Alexa on Raspberry Pi & Various Extensions

Build Steps

2. Setup hardware connections to identify https ngrok client

Build Steps

3. Setup executable Alexa commands using Amazon protocols

Grid Design

Verbal Grid

1A 1B 1C

2A 2B 2C

3A 3B 3C

GPIO Grid

1 2 3

4 5 6

7 8 9

Grid Modes

Grid (1,2,3,4,5,6,7,8,9)

Square (1,2,3,4,6,7,8,9)

Diamond (2,4,6,8)

X (1,3,5,7,9)

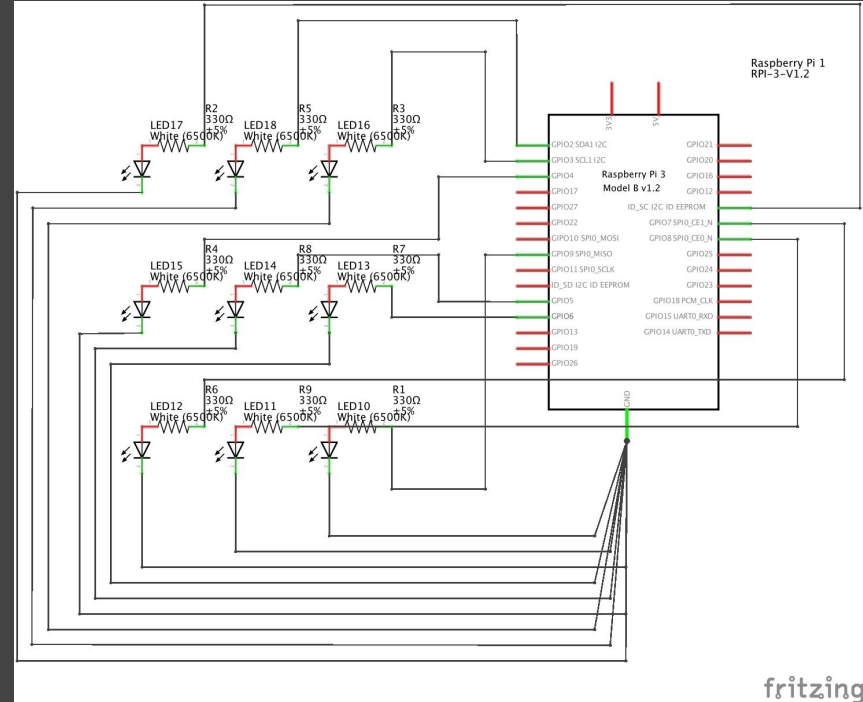

Corners (1,3,7,9)

Schematics

Responsibilities

KENIL

- Voice Recognition Software
- Testing and Documentation

MIKE

- Voice Recognition Software
- GPIO to LED Grid

VICTOR

- Voice Recognition Software
- Camera Man

SAMUEL

- GPIO to LED Grid
